Agenda

1. How do investors evaluate startups
2. How to contact investors
3. Which investor material do you need
4. Pitch deck – quick walk-through of typical content (**depending on time**)
5. Case: Funding for Recon Instruments

Brief intro to Nicolaj Højer Nielsen

Nicolaj Højer Nielsen

- ▶ Serial entrepreneur
- ▶ Investor
- ▶ External lecturer at Copenhagen Business School within entrepreneurship
- ▶ Consultant/advisor for multiple startups (fundraising, commercial strategy)
- ▶ Author of the Startup Funding Book (www.startupfundingbook.com)

Investment portfolio

Sold to Intel (2015)

The logo for Recon Instruments, featuring the word "recon" in a stylized font with a red swoosh under the "e", and "INSTRUMENTS" in a smaller, sans-serif font below it.

recon
INSTRUMENTS

The logo for Penn30, featuring the word "PENN30" in a bold, sans-serif font with a trademark symbol, set against a dark blue background.

1. How do investors evaluate startups

How investors analyze startups

- what are YOU offering?

What determines the risk/reward profile in a startup

① Your market

② Your business model

③ You, the team

④ Your progress/traction

Source: www.startupfundingbook.com

Two examples...same markets but
different business models

An idea is just risk....

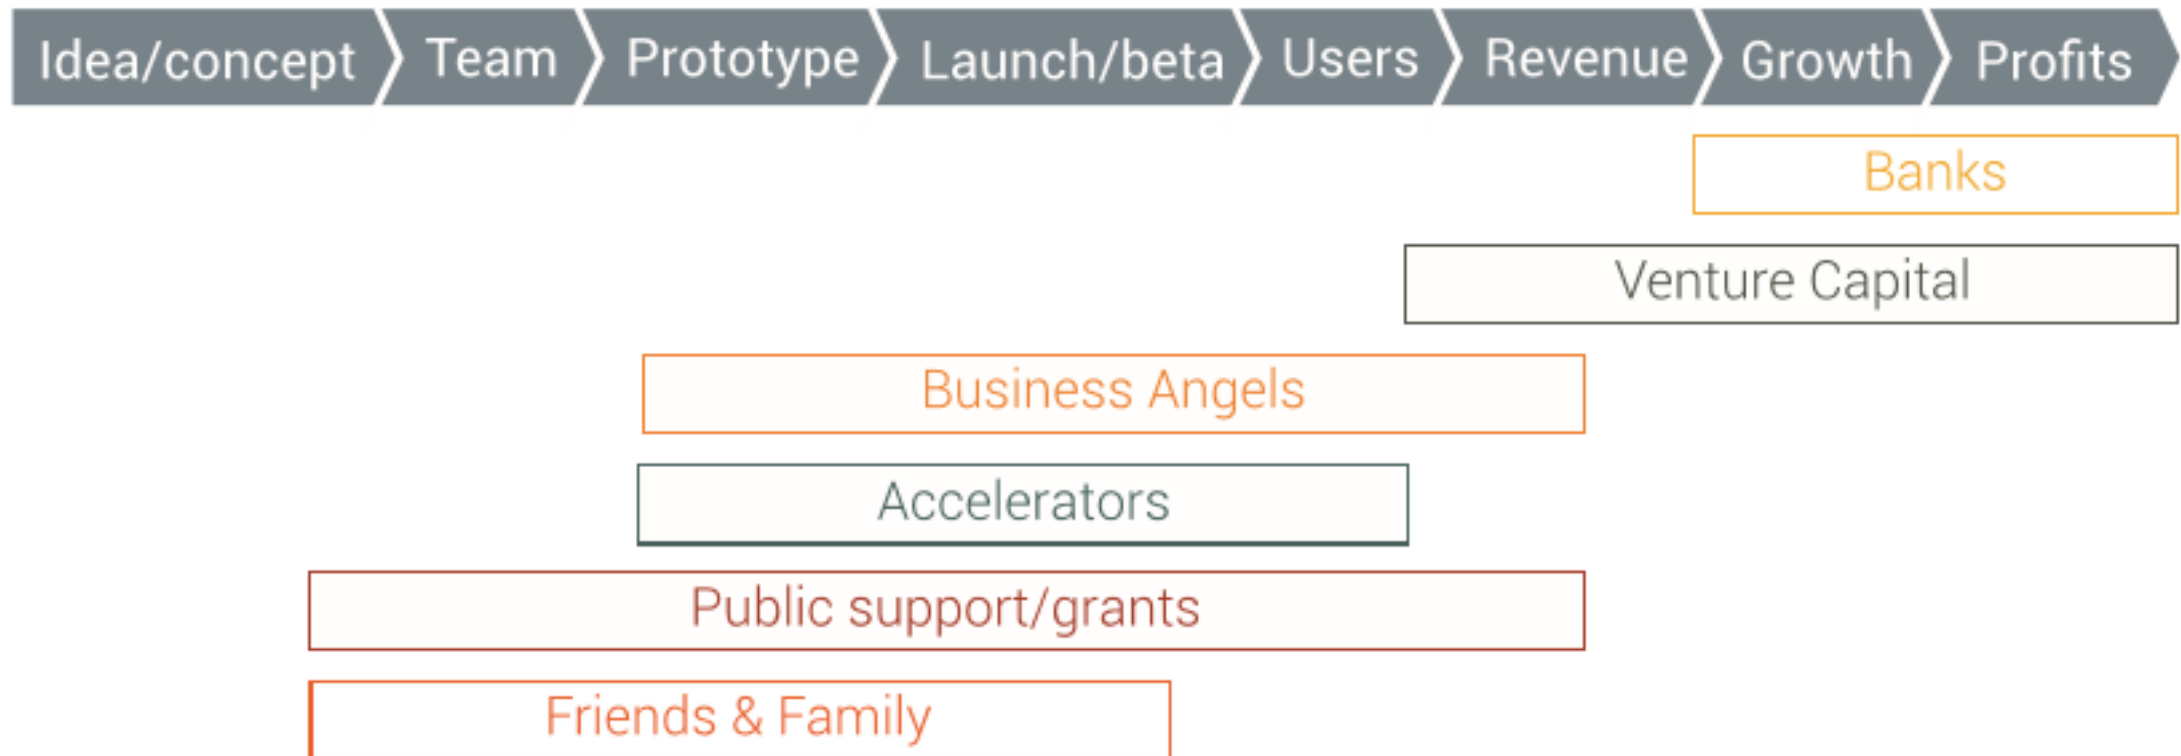

Source: www.startupfundingbook.com

Different investors have different appetite for risk/reward

So who invest in the early days?

Source: www.startupfundingbook.com

It's all about trust ...in the beginning trust in you!

*Early-stage is about
trusting you, later-stage
is about trusting
your data*

Source: www.startupfundingbook.com

The first investors often know you

Case: Trustpilot

Source: www.startupfundingbook.com

[Investment rounds in TrustPilot (Euro)]

2. How to contact investors

...Dragon's Den is fake

Source: www.startupfundingbook.com

The three important steps when reaching out to potential investors

How to contact potential investors

① Get introduced by mutual contacts

② Do your research and contact the right investors

③ Be specific

Source: www.startupfundingbook.com

Step 1: Get introduced by mutual contacts (if possible)

██████ - meet ██████ & ██████, a Danish IoT startup

9 messages

To: ██████
Cc: ██████
Wed, Jun 8, 2016 at 5:00 PM

Hi Nicolaj,

With this mail you are introduced to the two founders of Danish/Copenhagen start-up ██████, ██████ and ██████

The two founders ██████ and ██████ have both finished their master's degree in science in Denmark in 2015.

They then started the company ██████ while studying and they are now 100% dedicated to the company.

I am advisor to them and I have been deeply impressed with how far these two guys have come for own money.

They have built a complete modular HW & SW platform (including control platform), filed patents and they have their first customers but they now want to scale the commercial part of the company.

The guys are now looking for their first investment (they own 50/50 right now) and are looking for active Danish and international business angels who likes IoT.

The guys are in California the rest of this week and most of next week and they have met with ██████ also. So maybe you want to ask ██████ about what he thinks.

If this catches your interest they would be happy to meet you.

Kind regards
██████

Source: www.startupfundingbook.com

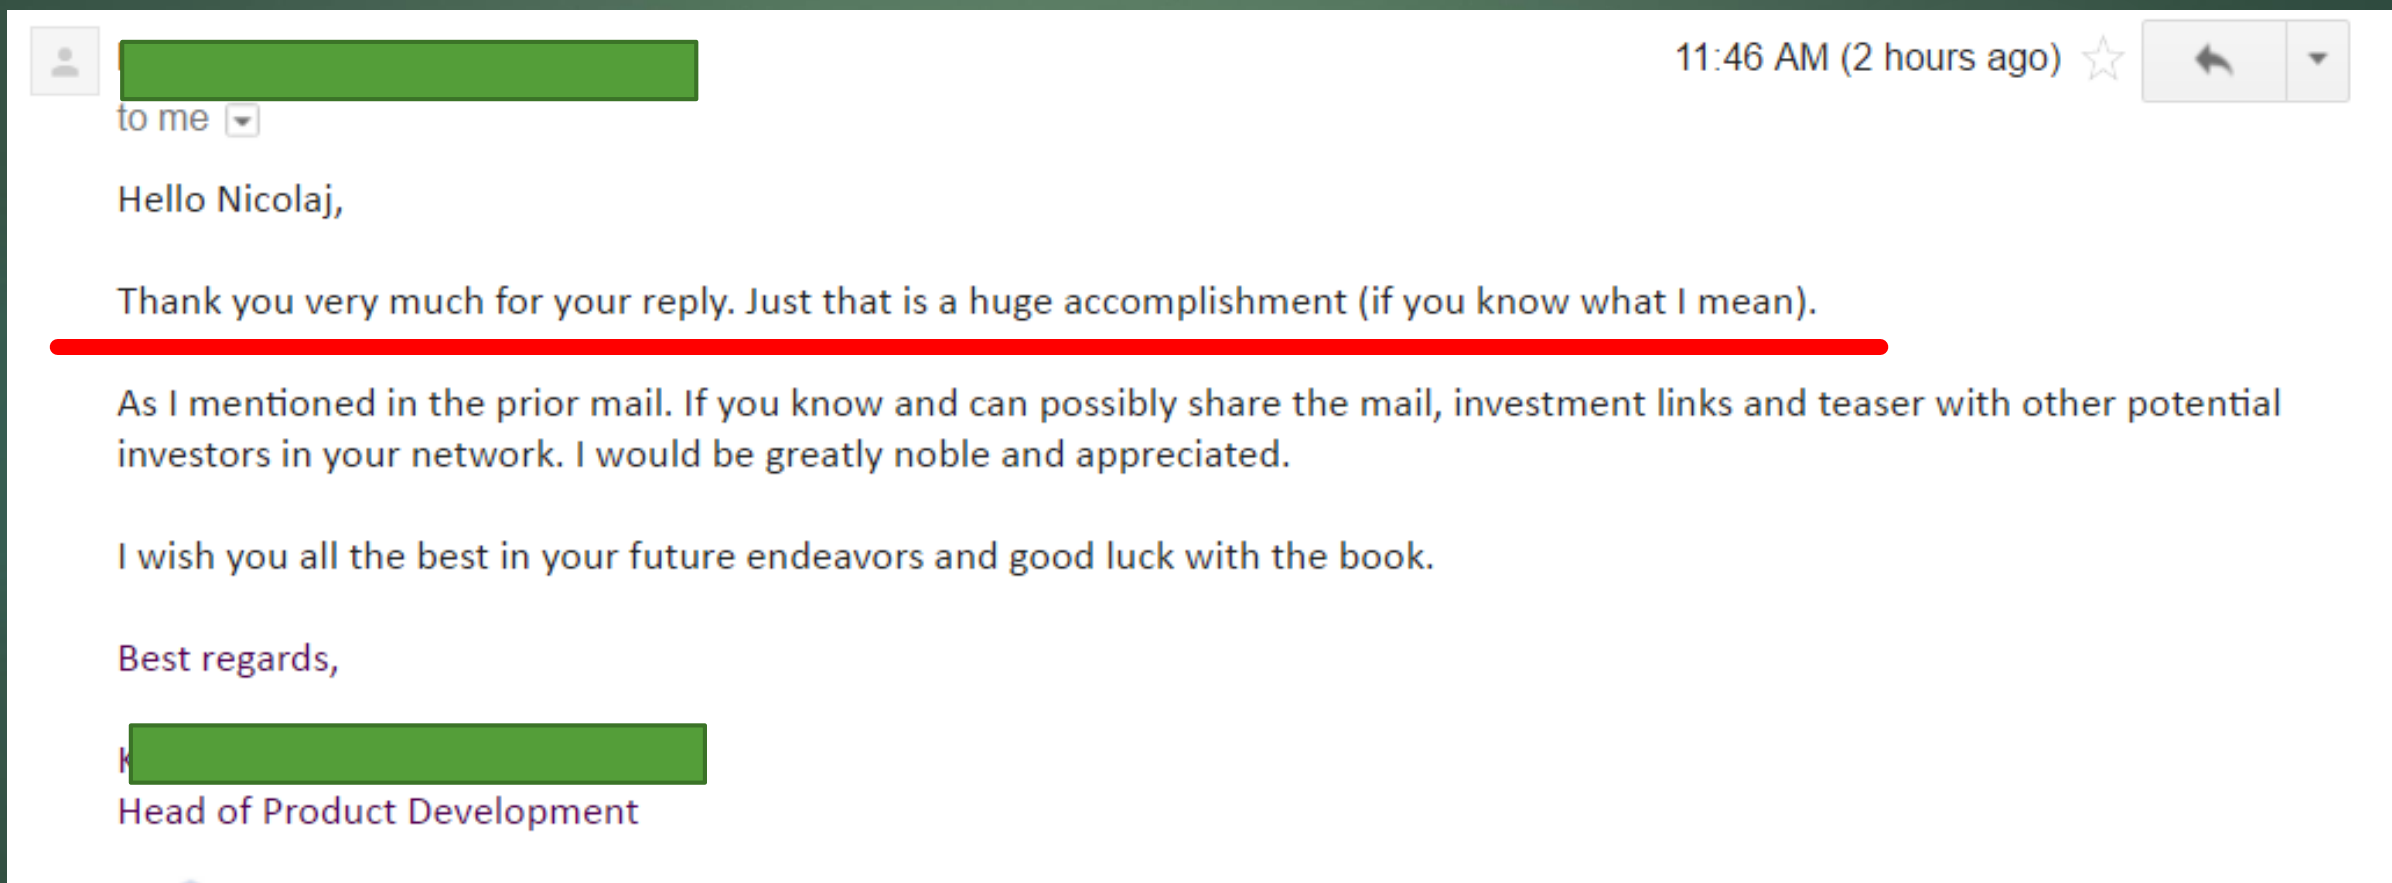

Step 2: Prioritize your search:

Likelihood of investing depends on..

DOES THE BUSINESS ANGEL KNOW YOU?		Business angel doesn't know you at all	You're friend of a friend with a recommendation	The business angel is a friend or relative who trusts you
DOES THE BUSINESS ANGEL KNOW YOUR INDUSTRY?	The business angel has no clue about the industry			
	The business angel has limited industry knowledge			
	The business angel is an industry expert			

Source: www.startupfundingbook.com

What happens if you just mail people in the “red” area...

Step 3: Be specific

Business angel: Don't just ask for coffee!

Tommy Andersen, a tech entrepreneur and business angel, explains:

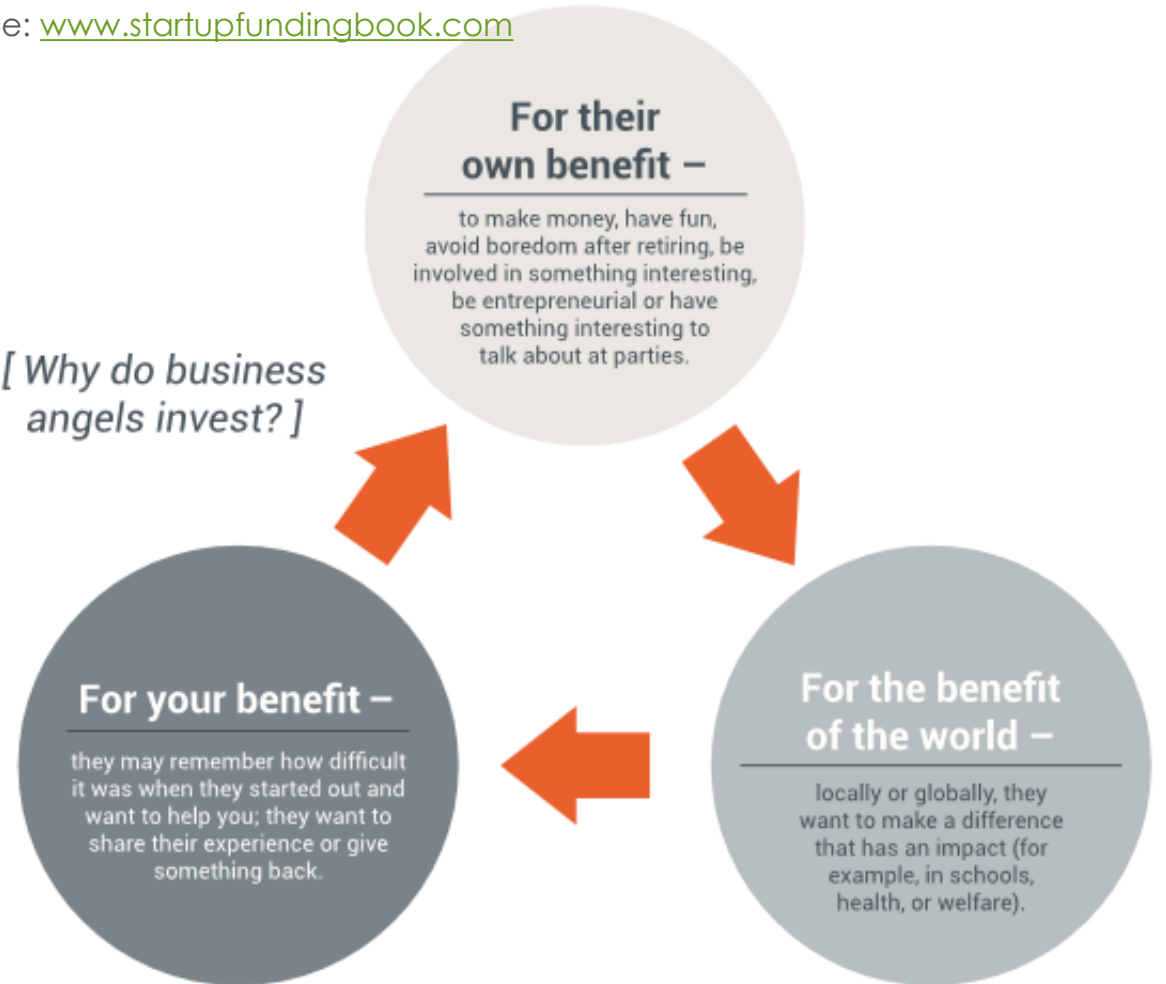

The biggest mistake startups make when pitching to me is saying, 'Let's have a coffee' without even telling me why. I have a busy daily routine and meet a lot of startups and founders all the time. Therefore, pitch me with a clear call-to-action and a clear message why we should meet for that special coffee. Just asking for a meet-up to hear about the world's greatest idea doesn't do the trick.

And remember, many early-stage investors (angels) are driven by more than money!

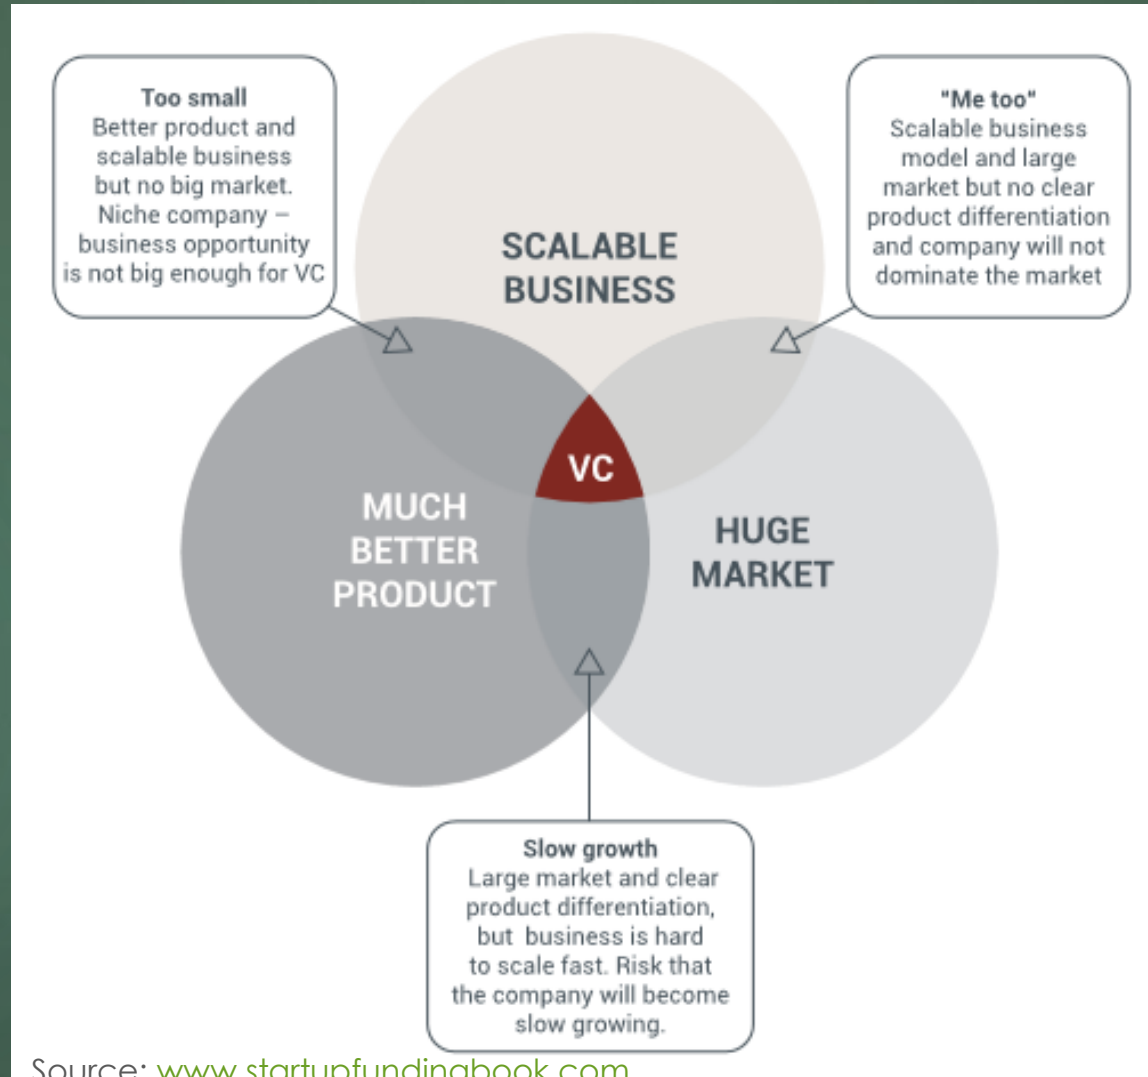

Source: www.startupfundingbook.com

[Why do business angels invest?]

Venture Capital – do you really have what they are looking for ?

3. Which investor material do you need

Do you really need a business plan?

- ▶ It's too long (you spend too much time making it)
- ▶ It's full of irrelevant details
- ▶ It's out of date

(investors in some countries/regions still want one)

First identify the right investors

You need to find investors who are relevant and who invest in:

① The same risk/reward matrix you're currently in

② The industry you're in

③ Startups at the same stage as yours

Source: www.startupfundingbook.com

Material #1: Get intro e-mails

From: Dan Eisenhardt [REDACTED]
Date: 2015-05-27 21:26 GMT+02:00
Subject: Intro to Sepior
To: [REDACTED]
Cc: [REDACTED]

Hi [REDACTED]

Hope things are going well at [REDACTED]

I want to introduce [REDACTED], who is a Danish serial entrepreneur and also one of the first investors in Recon Instruments. He is co-founder of Sepior, that is a startup working in the cloud encryption space. Sepior is currently headquartered in Denmark, where it has received seed funding, but is now investigating a potential move of HQ to US (but keep R&D in Denmark). [REDACTED] is looking for the right point of entry into [REDACTED] since Sepior might be a right fit for either [REDACTED] directly or for the dedicated [REDACTED] fund you have created. Nicolaj and the CTO of Sepior will be in Bay area next week.

Please find attached a brief intro deck on Sepior.

Best regards,

Dan

Dan Eisenhardt
President & CEO

Material #2 : An executive summary

Source: www.startupfundingbook.com

Reducing online bank fraud without irritating the end-users

Industry: IT-security software

Key IP: Three patents concerning novel obfuscation technologies and validation of web pages using JavaScripts

Product: The world's first invisible Web Session Firewall that does not require any end-user action or client installation

Customers and business model: Financial institutions, recurring software licensing fees

Status: Product launched in Dec 2011. Three banks signed as pilot-customers (total of 20 million users)

Company: Located in Copenhagen, Denmark. 12 FTEs.

Current investors: SEED Capital (DK), business angels and founders (\$2.5 million in total)

The pain. Half of the world's computers are infected with viruses that cyber criminals use to commit online bank fraud. The direct losses are \$3-4 billion per year and growing with +20 % p.a. Banks have no effective measures against the attacks. The current solutions demand the active involvement of the end-users leading to very high implementation and maintenance costs, inconvenience for the end-users and lack of compliance.

CodeSealer's solution. The world's first invisible software based Web Session Firewall that does not require any end-user action or client installation. It enables financial institutions to reduce direct and indirect costs of malware-based mobile- and online bank fraud.

The product is installed on the bank's servers and works by establishing a secure session between the user's browser and the Web Session Firewall. The product continuously monitors the web pages displayed to the end-user to detect unauthorized changes. All communication with the user's browser is encrypted and authenticated using session-specific cryptographic keys. The unique obfuscation and verification technologies are protected by three patents.

CodeSealer's approach is unique. A) We are protecting the bank's entire online bank user-base without annoying them! B) We are not trying to remove the malware, but instead detecting whenever it tries to break into the online bank and C) The solution is browser independent and

Executive summary (2/2)

Current investors: SEED Capital (DK), business angels and founders (\$2.5 million in total)

Investment opportunity: \$5 million in Q4 2012 to accelerate sales and marketing

Key Team Members:

██████████ CEO

Serial entrepreneur, 10 years' experience in commercialization of technology products

██████████ CTO

15 years' experience within cryptography and IT-security consultant to several banks

██████████ VP Sales

Highly experienced in sales of IT-security products to EU banks

Forecast: Cash-flow positive by Q2 2013. By 2015 the company will protect 175 million users, have yearly revenue of \$90 million and EBITDA margins of +60%.

CodeSealer's approach is unique. A) we are protecting the bank's entire online bank user-base without annoying them! B) We are not trying to remove the malware, but instead detecting whenever it tries to break into the online bank and C) The solution is browser independent and works on both PCs, macs, tablets and smartphones.

The market. The addressable market is the approx. \$3 billion banks are spending on two-factor authentication systems, to which CodeSealer's solution is a strong complement. The main geographical market has so far been EU, but the use of two-factor authentication is rapidly spreading to USA (driven by new regulation) and Asia (driven by rapid increase in online banking). The current global 1 billion online bank users will have increased to 2 billion users by 2015.

Traction. The first product has been released and has been launched in EU in November 2011. Three European banks with up to 20 million users have signed as pilot-customers with further ten banks in the pipeline (75 million users).

Partnership with IBM. CodeSealer has furthermore signed a non-exclusive partnership agreement with IBM, who has a very strong presence within the financial services sector. IBM will help market the product by testing the product and present the solution towards their clients.

More information. For additional information or to schedule a presentation detailing the opportunity please contact ██████████ at ██████████ or ██████████

Ps. Don't ask the receiver to sign a
NDA!!!

Material #3: The pitch deck (replaces the business plan)

The typical content of a pitch deck

DocSend analysed the content of the pitch decks from 200 different startups. On average there were 19 slides with the content shown below:

Source: DocSend

Source: www.startupfundingbook.com

4. Quick walk-through of pitch deck

Company name	Brief description
Capdesk	<p>Capdesk is online software (SaaS) aimed at private companies and their investors. Capdesk is a shareholder management tool that makes it easier for companies to manage their investors, for investors to be updated on progress in the company, and for investors to trade these shares in unlisted companies. Capdesk was founded in 2015 and the pitch deck used here is from the business angel funding in 2015-2016.</p>
Recon Instruments	<p>Recon Instruments is a consumer electronics company. Their first product was ski goggles with a built-in head-up-display (computer screen) and later a sunglasses version. The company was founded in 2007 and sold to Intel in 2015. The pitch deck used here is from 2009 when the company was looking for business angel and/or venture capital funding.</p>
MotilityCount	<p>MotilityCount is a biotech company. Their first product was a male fertility test (sperm quality test) for home use. The company was founded in 2010, and the pitch deck used here is from the first investment round in 2011 where business angels and public funds invested in the company.</p>
Sepior	<p>Sepior is a cyber security company. Their first product is an encryption solution that protects cloud services (Dropbox, Gmail etc.) from being hacked. The pitch deck used here is from the seed/venture round in 2015 and 2016.</p>

3. The pain (Motilitycount)

Source: www.startupfundingbook.com

Pain: Male infertility

Many couples are concerned about sperm quality

- 1/6 of all couples have to use In Vitro Fertilization to get pregnant
- Large part of infertility cases are linked to sperm quality
- USA: Population of 6-7 million women having problem getting pregnant*
- Denmark: 37.000 IVF treatments per year**
- Denmark: 8,5% of all babies are born with the help of IVF***

But need to visit specialty clinic or hospital to get answer

- No valid home-test on the market
- Couple will have to visit their doctor
- But doctor/GP can not test sperm quality, and will refer to IVF clinic/hospital
- If not living close (less than 1 hour away) to hospital/clinic, sperm sample has to be produced at the site...

Very inconveniently, time consuming and embarrassing for men/couples to know if he has poor sperm quality

* <http://www.cdc.gov/reproductivehealth/infertility/#4>

** <http://www.sst.dk/Nyhedscenter/Nyheder/2012/Fertilitetsbehandler2010.aspx>

*** http://fertilitetsselskab.dk/images/2013_dok/aarsmoedefiler2013/dfs2012.pdf

4. The solution (Motilitycount)

Solution and value proposition

An easy-to-use test-kit, which gives a fast and reliable answer on male fertility

- **Results:** Colour reaction (poor vs. normal sperm quality)
- **Privacy:** Eliminates the need to visit IVF specialist/hospital for (initial) testing
- **Convenience :** Can be bought at pharmacies, drugstores and online
- **Reliable:** Test results correlate strongly with golden standard (microscopy)
- **Fast:** Gives answer within 30-60 minutes
- **Easy to use:** No liquids to handle

Source: www.startupfundingbook.com

5. The unfair advantage (Sepior)

Our secret source

Know how

- Leaders within Secure Multiparty Computation (SMC)
- The first in the world to have commercialized SMC
- Commercial SMC applications dependent on *both* speed of algorithms & knowledge of practical use
 - Our general-purpose algorithms are the worlds fastest
 - Special-purpose algorithms tailored to key management (otherwise SMC not feasible!)

IP strategy

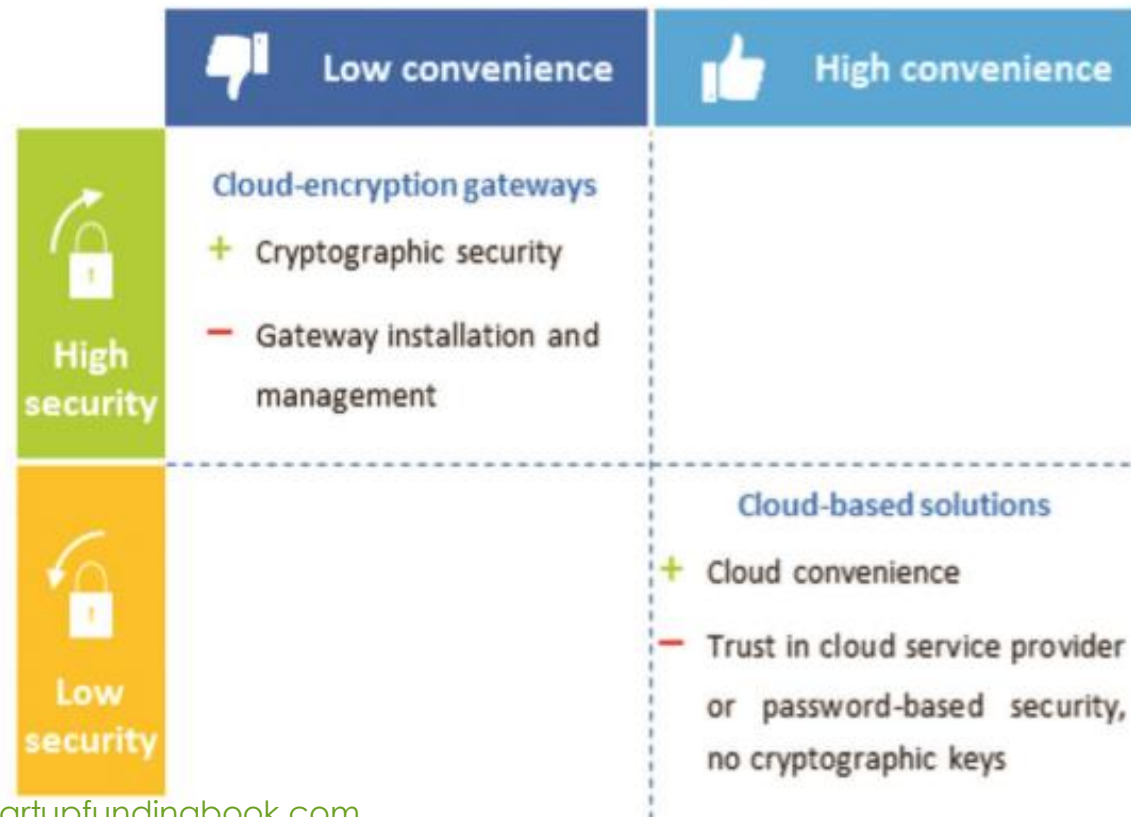

- Patenting specific parts of the KMaaS solution, making it even harder to enter for potential future competitors

Unique and hard to replicate know how, built upon +20 years of university research

6. Competition (Sepior)

10. Go to market (Motilitycount)

GO-TO-MARKET STRATEGIES

PLAN A

- Licensing agreement with major OTC player in 2012
- Sales and marketing to be done by partner
- No further capital will be needed

PLAN B

- Bring the product to the market
- In collaboration with independent distributors
- More capital will be needed in 2013
- Long term strategy will remain the same (Plan A)

11. Financials (Motilitycount)

FORECAST

ASSUMPTIONS

- Licensing agreement to be signed [redacted]
- Distributed by global market leader [redacted]
- Product to be launched in January 2013
 - 2013: [redacted] units
 - 2014: [redacted] units
 - 2015: [redacted] units
- Retail price: \$40-60/unit
- Sales price to licensing partner: \$10/unit (COGS of \$4/unit)

Source: www.startupfundingbook.com

Fund Raising

- \$900k CAD raised to date
 - 50% from non-diluting government sources
 - 50% from high net worth individuals (current investors have shown interest for additional support)
- Seeking 1.5-2 million CAD for 2010
 - 880k CAD for R&D
 - 330k CAD to execute sales growth
 - 500k CAD in working capital

13. The ask (Sepior)

Series A funding: [redacted] million

Use of proceeds:

- R&D in Aarhus:
 - Expand software-development team (to aprox [redacted] FTE)
- US HQ

Milestones next 12-18 months:

- Product:
 - Expand API and solution with new features
 - Integrate to key CSPs
- Sales:
 - Partnership/integration agreements with [redacted] CSPs
 - Solution used by [redacted] end-customers ([redacted] employees)
 - Annualized revenue of \$[redacted]

Source: www.startupfundingbook.com

14. Summary (Capdesk)

Why Capdesk?

1 **Ambition, team and technology**
to impact a \$250B market

2 **Scaleable**
1 company = 200 shareholders
200 shareholders = 10 company invites

3 **Born global**
Users from all over the world

4 **Exit Opportunities**
Exchanges, Investment Banks, Transfer Agents, Investment Platforms, Payment providers etc.

Intro e-mail example

Source: www.startupfundingbook.com

██████████,

My name is ██████████, and I'm an INSEAD graduate (MBA'06J).

I am contacting you because I since 2008 have invested my personal funds as seed capital for a start-up called Recon Instruments (www.reconinstruments.com) and because you in the INSEAD Alumni database have indicated an interest in angel investments.

Recon Instruments is the first company in the world to integrate a Head Mounted Display into a pair of ski goggles. Using embedded state-of-the-art sensor and GPS technology we provide easy access to navigation, communication, and performance based-information in real time. We consider ourselves the Intel Inside of the action sports industry, partnering with well known brands and distributors to bring our electronics and optics to consumers and professional athletes alike.

We are currently partnering with a high-end Goggle and Sunglasses brand for an exclusive September 2010 launch in North America and Europe. The Recon Alpine Goggle's feature set includes: speed, altimeter, vertical odometer, stop-watch, temperature, and time. These performance statistics can be viewed in real-time or après-ski. Content can be uploaded via USB to your PC and shared online. Future models include seamless integration to I-Phone/Smartphone, Hands-free interfacing using gesture control, and camera integrated solutions enabling recording and viewing of video content during an activity. I have attached a picture of the first product (ski-goggle).

Founded in 2006, incorporated in 2008, Recon Instruments is a privately-held company with just fewer than twenty employees. With offices in Vancouver and boundless testing grounds in Whistler, home of the 2010 winter Olympics, Recon Instruments is dedicated to enhancing performance and experience of millions of action sports enthusiast around the world. We are already endorsed by a growing community of alpine skiers and snowboarders and we are in the final as the hottest new brand of 2010 at ISPO in Europe. In January we are shooting a film with Discovery Channel to be aired during Olympics.

We are raising CAD 0.9-1.5 million in an Angel round to finance the scale up to mass production and to fuel the growth into related industry applications (other action sports, aircraft, military). Just under \$1 million has been raised to date, with 50% government funding rate, so we are firmly positioned to provide significant leverage on each dollar invested and thus expect a 10 times return multiplier in 3-4 years through either cash buyout or IPO. The closest industry comparable is a Public company named Microvision trading at 64x revenues, which confirms the market's belief in the future of Head Mounted Display technologies.

Executive summary to interested people

PRODUCT & TECHNOLOGY:

- **Hardware** – Head Mounted Display mounted inside goggle or helmet
- **Software** – GPS, Sensing, Web, Smartphone, and visual UI
- Fits in e.g. Snow/MTB Goggles, MC Helmets and Military Equipment
- Combines hands-free user interfaces with augmented reality

FUNDING TO DATE:

- Founders: \$200,000
- Angels: \$420,000
- Government grants: \$320,000
- 45% of core R&D costs covered by SR&ED cash based tax credits

INITIAL MARKETS: (Snow & Dirt)

- 108 million people
- \$1.0 billion in goggle sales
- Average yearly growth of 11%
- Addressable market: \$755 million

OVERVIEW

Recon Instruments, Inc. ("Recon") is a Vancouver based Company focused on delivering innovative self-contained Head Mounted Display ("HMD") technologies. A working prototype, mounted inside a pair of ski goggles, has been demonstrated to the Tier 1 global sports eyewear companies with negotiations ongoing. In November 2009 Recon entered into a partnership worth CAD 3.4 Million with Zeal Optics of Colorado (USA). Under this 3-year agreement, Recon will deliver an estimated 65,000 hardware units under a co-branding agreement using the existing goggle manufacturing and distribution channels of Zeal Optics.

The miniature built in display delivers real time feedback/visualization to the user based on a variety of applications running either on-board or wirelessly through Smart handheld devices (iPhone, Android, Blackberry). The image displayed inside the goggle (or helmet) is easily readable and completely non-obtrusive to front and peripheral vision. Furthermore, minimum user interaction is required during run time. On-the-move access to information would increase efficiency, improve safety, measure performance and ensure full enjoyment of the application.

APPENDIX 12 - PLAN B Competitors Analysis	40
APPENDIX 13 - PLAN B Monthly Number of Charms Sent in Happn	42
APPENDIX 14 - PLAN B New Business Model	43

Where to look for angels

Source: www.startupfundingbook.com

	NEW ANGELS	BA NETWORKS	SUPER ANGELS
Role	Typically passive but often wants to be involved on an ad-hoc basis; you have the chance to get valuable know how	Varies but one angel often acts as lead and is typically very active while other investors are more passive	Typically actively uses their own network and personal brand to help make the startup a success
Alone or in consortia	Usually invests alone but you can pool them together to reach your funding goal, e.g. use 3-5 different investors	Most prefer to make consortia with other angels from same network: spread risk, more power	Invest alone or with other investors they trust (both private and institutional investors)
Investment size	Typically, less than €50,000 per person per round	Varies, but typical investment round comprises of €100,000-500,000 invested by 2-5 angels together	Varies, up to €1 million per company, but more often €100,000-250,000 per investment round
Industry focus	None, but much harder to convince investors if the technology is so specialised that they don't understand the problem or solution	Varies, but normally at least one person in the consortium has the industry know-how necessary to convince them	Experienced entrepreneurs who typically invest in the same industries as those in which they made their own money
How to find them	Your extended network, i.e. friends of friends; typically don't consider themselves business angels but have equity from successful corporate careers or startups	BA network webpages; you can upload a deck and ask to pitch in front of the angels; better chance of success if you are introduced to one of the angels beforehand	Articles and public information on people who have built successful companies and invested in startups; better to be introduced via mutual contacts
